Haseeb Niazi

Hamilton, ON | (289) 489-4270 | haseeb.kn@outlook.com | haseeb.ca | linkedin.com/in/haseebn | github.com/haseebn19

Education

University of Guelph Guelph, ON

Bachelor of Computing, Honours, Software Engineering *2026*

- Relevant Coursework: Software Design, Data Structures, Object-Oriented Programming, Database Systems
- Dean's Honours List (Fall 2021, Fall 2025, Winter 2026); University of Guelph Entrance Scholarship (Fall 2021)

Experience

Freelance Game Developer Jan 2022 – Present

Independent game studio *Remote*

- Developed gameplay systems, user interfaces, and player-facing features in Luau for multiplayer games on Roblox.
- Integrated persistent data storage APIs for player progress and in-game systems.
- Contributed to a released multiplayer game that reached **4.6M+ lifetime visits** and **10K+ monthly active users** at peak.
- Currently developing a new original multiplayer game with the studio.

Projects

ReQuizle | *React, TypeScript, IndexedDB* Nov 2025 – Present

- Built a local-first spaced-repetition study app with multiple question types and mastery tracking.
- Added import and export tools and PWA support so the app can be installed and used offline.
- Stored user data locally in the browser using IndexedDB.

UniDetect | *React, TypeScript, PDF.js, Mammoth.js, Vitest, Docker* May 2025

- Built a browser-based utility for detecting and cleaning hidden Unicode characters in uploaded documents.
- Added local processing for PDF, DOCX, TXT, and Markdown files, so documents never leave the browser.
- Added automated tests with Vitest and a Docker-based development setup.

Urban Housing Demand | *React, TypeScript, Spring Boot, Java, MariaDB, Python, Docker* Jan 2025 – Apr 2025

- Collaborated in an Agile team on a full-stack dashboard for exploring housing, labour, and immigration data.
- Project included interactive visualizations and a containerized development setup.

Hostage Chess | *Python* Sep 2024 – Dec 2024

- Developed a multiplayer web implementation of Hostage Chess with a custom Python rules engine.
- Implemented server-side move validation, matchmaking, timers, and game history.
- Added automated tests for game rules and edge cases.

Password Generator | *C#, .NET 8, WPF, MVVM* Sep 2023

- Built a Windows desktop password generator with configurable rules and real-time strength evaluation using Zxcvbn.
- Implemented theme support and unit tests.

Technical Skills

Languages: Python, JavaScript, TypeScript, Java, SQL, Luau, C#, C
Technologies: React, HTML/CSS, Spring Boot, WPF, PyQt, Docker, Git, GitHub Actions
Databases: PostgreSQL, MariaDB, SQLite
